Med.
                                                 FUNCTION: Has an integral role during the infection of macrophag in the mammalian host.

CATALYTIC ACTIVITY: Preference for hydrophobic residues at P1 and p1 and basic residues at P2 and P3'. A model nonapeptide is p1 and basic residues at P2 and P3'. A model nonapeptide is cleaved at -Ala-Tyr-1-Leu-Lys-Lys-

COEACTOR: Binds 1 zinc ion per subunit.

COEACTOR: Binds 1 zinc ion per subunit

SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor. PM: THE PHOSPHATIDYLINOSITOL MOIETY OF THE GPI-ANCHOR CONTAINS FULLY SATURATED UNBRANCHED 1-O-ALKYL CHAIN (MAINLY C24:0) AND A MIXTURE OF FULLY SATURATED UNBRANCHED 2-O-ACYL CHAINS (C12:0)
                        SIMILARITY: Belongs to peptidase family

Hydrolase; Metalloprotease; Glycoprotein; Metal-binding; Zinc;
Zymogen; Signal; Cell adhesion; GPI-anchor; 3D-structure; Lipoprotein.
SIGNAL 1 39 POTENTIAL.
PROPEP 40 100 ACTIVATION PEPTIDE.
CHAIN 101 577 LEISHMANDLYSIN
PROPEP 578 602 REMOVED IN MATURE FORM.
METAL 264 264 ZINC (CATALYTIC).
METAL 265 265 METAL 334 334 ZINC (CATALYTIC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombination of the homologous species; (3) directing recombination of a recombination of a recombination of the homologous species, replacing the native

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

(I) is useful for the expression of recombinant AgfA protein which is useful for cell-cell celliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the carrier fimbrial subunit proteins are usually strong communogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong communogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and consequence is given in the acceptance of the acceptance is given in the acceptance of the acceptance is given in the acceptance in an animal response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 151;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC Agfa, CsyA and Agfa-homologue finbrin subunits, respectively; (2)

CC directing recombination of a recombination of a recombination of the chromosome of the chomologous species; (3) directing recombination of a recombinant gene into the chromosome of the chomologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant Agfa (2) comprising separating an amino acid polymer comprising a recombinant Agfa (3) crotein containing a replacement segment or segments of foreign amino card sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the golymer into the animal in conjunction with a carrier or diluent. (1) is cuseful for the expression of recombinant Agfa protein which is useful for cellciting an immune response in an animal. In a fimbrial presentation consistency and adhesion properties relevant for an efficient live carcine, the carrier fimbrial subunit proteins are usually strong communogens, which may be important for directing an immune response consists the inserted epitope, and hybrid fimbriae are usually strong consists the inserted epitope, and hybrid fimbriae are easy and consists the inserted epitope, and hybrid fimbriae are sequence is given in the present threation of the present threation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segmence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEFI/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are:
                                                                                                                                                                 Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                 WPI; 2000-672631/65.

The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                       Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      comprising separating an amino acid polymer comprising a recombinant AgfA comprising sequence or sequence someth or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (1) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, cc comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino caid sequence or sequences grown on a Salmonella, E. coli or caid sequence or sequences grown on a Salmonella, E. coli or colymer into the animal in conjunction with a carrier or diluent. (1) is cc useful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a finbrial presentation cc system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the cc simulation properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong c immunogenicity and adhesion properties relevant for an efficient live cagainst the inserted epitope, and hybrid fimbriae are easy and c inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches 129;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEP17/TAF) nucleation depended assembly system of strains of Salmonella, Escharichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CegA and AgfA-homologue fimbrin subunits, respectively; (2)
                                                           AgfA::PT3#7 amino acid sequence SEQ ID NO:24.
                                                                                                    26-FEB-2001
                                                                                                                                                                                   AAB36352 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              directing recombination of a recombinant gene into the chromosome of homologous species; (3) directing recombination of a recombinant gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Page 137; 139pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (UYVI-) UNIV VICTORIA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 X 2 2 2 X Y X G X Y
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (1) is useful for the expression of recombinant AgfA protein which is useful for the system the heterologous antigens are presented in high numbers (up to $90,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                   The present invention describes a recombinant agfA gene (I) where a ce segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CC Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively, (2) CC directing recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA comprising separating an amino acid polymer comprising a recombinant AgfA grotein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the CC soliciting an immune response in an animal. In a fimbrial presentation acid sequence or sequences grown on a Salmonella, E. coli or consistent of the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation cc system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin proteins are usually strong cimmunogens, which may be important for directing an immune response consumination of the noreant invention. The present sequence is given in the exemplification of the present invention.
                                                                                                                            Query Match

CC The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAP) nucleation depended CC Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA, CsgA and AgfA-homologue finbria subunits, respectively; (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant of a recombinant gene back into the chromosome of the homologous species, replacing the native CC copy of that gene; and (4) eliciting an immune response in an animal. CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC strerobacteriaceae host cell, from the host cell and introducing the CC useful for the expression of recombinant AgfA protein which is useful for CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to CC system the heterologous antigens are presented in high numbers (up to copies/cell), the hybrid fimbrin protein possesses both the carrier fimbrial subunit proteins are usually strong communogens, which may be important for directing an immune response cc against the inserted epitope, and hybrid fimbriae are easy and constructed in high numbers in a system the inserted epitope, and hybrid fimbriae are easy and constructed epitope, and hybrid fimbriae are easy and constructed epitope, and hybrid fimbriae are easy and constructed epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 10

The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species; (3) directing an immune response in an animal, comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or
                                                                                                                                                                                                                                                                                                                                                                           Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      White AP,

(I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immuniogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epicope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the accomplished the present sequence is given in

The present invention describes a recombinant agfA gene (I) where segment of the gene has been replaced by a segment of a foreign D sequence which encodes a foreign epitope or antigen. Also describ

Also described

DNA

Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

segment of the sequence which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbria subunits, respectively, (2) CC directing recombination of a recombinant gene into the chromosome of the homologous species, (3) directing recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a recombination of a replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segments or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or conterbacteriaceae host cell, from the host cell and introducing the coliciting an immune response in an animal. In a fimbrial presentation conjunction with a carrier or diluent. (I) is cuseful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation conjunction with a carrier or diluent. (I) is cuseful for the expression of recombinant AgfA protein which is useful for celiciting an immune response in an animal. In a fimbrial presentation conjunction with a carrier or diluent. (I) is cuseful for the heterologous antigens are presented in high numbers (up to conjusted the heterologous antigens are presented in high numbers (up to conjusted the heterologous antigens are presented in high numbers (up to communogens, which may be important for directing an immune response consuments of the symmetry for directing are usually strong consuments of the symmetry invention. The present sequence is given in the carrier fimbrial are usually strong consuments of the symmetry invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local Sin

                                                                                                밁
                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                        directing recombination of a recombinant gene into the chromosome of the chomologous species; (3) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid gequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for cellciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immune response
                                                                                                                                                                                                                                                                                            Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                         immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a recombinant agfA gene (I) where a CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended CC assembly system of strains of Salmonella, Escherichia coli and CE Enterobacteriaceae for the production of fimbriae comprising recombinant CC AgfA. CSGA and AgfA-homologue fimbrin subunits, respectively; (2) cc directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the coliviting an immune response in an asimal. In a fimbrial presentation CC sold sequence or sequences grown on a Salmonella, E. coli or SO,000 copies/cell), the hybrid fimbria protein which is useful for system the heterologous antigens are presented in high numbers (up to SO,000 copies/cell), the hybrid fimbria are usually strong constituted and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong constituted entrole and hybrid fimbriae are easy and

                                                                                                                                                                                                                                          The invention relates to an isolated peptide capable of binding a mammal manufalian plasma protein or of generating an immune response in a mammal selected from sequences shown in ABR82642, ABR82648-49. The peptide or antibody is useful for treating a bacterial infection in a human or animal or in the manufacture of a medicament for the prophylactic treatment of a bacterial infection, such as Escherichia coli, Salmonella or Shigella infection. The peptide that is immobilized on a solid support is also useful as a reagent for determining the ability of a plasma protein to bind to bacteria. The present sequence represents an E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                         or Shigella infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated peptide capable of binding a mammalian plasma protein, useful in the manufacture of a medicament for the prevention and/or treatment of a bacterial infection, such as Escherichia coli, Salmonella

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score
